

```

egrapa@la1n ~/p/D/terraform (lab04)> terraform init
Initializing the backend...
Initializing provider plugins...
- Finding latest version of yandex-cloud/yandex...
- Installing yandex-cloud/yandex v0.187.0...

```

```

Commands will detect it and remind you to do so if necessary.
• egrapa@la1n ~/p/D/terraform (lab04)> terraform validate
Success! The configuration is valid.

• egrapa@la1n ~/p/D/terraform (lab04)> terraform plan
data.yandex_compute_image.ubuntu: Reading...
data.yandex_compute_image.ubuntu: Read complete after 0s

Terraform used the selected providers to generate the following execution plan:
+ create

Terraform will perform the following actions:

# yandex_compute_instance.vm will be created
+ resource "yandex_compute_instance" "vm" {
  + created_at           = (known after apply)
  + folder_id           = (known after apply)
  + fqdn                 = (known after apply)
  + gpu_cluster_id       = (known after apply)
  + hardware_generation = (known after apply)
  + hostname             = (known after apply)
  + id                   = (known after apply)
  + maintenance_grace_period = (known after apply)
  + maintenance_policy   = (known after apply)
  + metadata             = {

```

```

Note: You didn't use the -out option to save this plan,
egrapa@la1n ~/p/D/terraform (lab04)> terraform apply
data.yandex_compute_image.ubuntu: Reading...
data.yandex_compute_image.ubuntu: Read complete after 1s

Terraform used the selected providers to generate the following execution plan:
+ create

Terraform will perform the following actions:

# yandex_compute_instance.vm will be created
+ resource "yandex_compute_instance" "vm" {

```

```

Do you want to perform these actions?
  Terraform will perform the actions described above
  Only 'yes' will be accepted to approve.

  Enter a value: yes
